

OREGIN

OREGIN (ORganisation of European GNSS INdustry) is an organisation set up in 1999 to support the interests of the European GNSS user segment industry (equipment manufacturers, integrators and service providers). In particular, OREGIN provides opportunities to influence and keep informed of on-going European activity concerning Galileo, benefit from existing synergies and foster co-operation within and beyond Europe.

OREGIN is already proving its capabilities in supporting the Galileo programme by:

- providing expertise at the user segment level in the major European projects,
- supporting European industry through publicity and lobbying actions aimed at European and National Institutions and within European industry itself,
- fostering co-operation with non-European industries, creating opportunities in overseas and global markets

OREGIN Mission and objectives

- to support the development of GALILEO users segment equipment and services,
- to provide public authorities with technical and marketing expertise and support in analysing the impact of GALILEO architecture on user equipment and services,
- to support the necessary efforts on standardisation and certification for the development of user segment equipment and services,
- to foster the identification of business opportunities and define the necessary actions to ensure their success,
- to foster partnership between industrialists and in particular between large corporations and SMEs,
- to rapidly and efficiently circulate relevant information,
- to promote European industry, technology, products and services,
- to encourage participation of universities and research centres in R&D activities related to GALILEO developments.

5th OREGIN Plenary meeting

Workshop on GNSS applications

1st December 2000

Europa Inter-continental Brussels

Rue de la loi 107, 1040 Brussels, Belgium

Metro Schuman

Phone: +32 (0) 2 230.13.33

Fax: 32 (0) 2 280.09.67

with the participation of

5th OREGIN Plenary meeting

Introduction

In the framework of the 5th OREGIN plenary meeting, a workshop on GNSS applications is organised with the European Commission (EC) and the European Space Agency (ESA). This workshop will focus on the development of Satellite Navigation related applications.

ESA and the EC are willing to present their current and planned activities and opportunities regarding Satellite Navigation infrastructure and applications.

This workshop will provide the first important opportunity for open interactive discussions with the European Institutions. These discussions will lead to the elaboration of a list of recommendations for European actions preparing a favourable environment for the development of Satellite Navigation related applications.

This meeting will also be a good test to manifest to the European institutions, the user segment industry interest in this field.

Agenda

- 10.00** Workshop introduction and objectives **OREGIN**
- 10.20** The GALILEO programme **EC**
- 10.30** Towards the decision on GALILEO:
 - Applications and Business Opportunities **EC**
 - Mission Requirements (services) **EC**
 - Baseline Architecture
 - Space segment **ESA**
 - Local elements **EC**
 - GALILEO Implementation Schedule **EC**
- 11.40** Coffee break
- 11.55** EGNOS paves the Way
 - EGNOS Implementation Schedule **ESA**
 - EGNOS System Test Bed **ESA**
 - Demonstrations accomplished so far **ESA**
- 12.40** Lunch

Agenda

- 14.00** EC/ESA Proposal for Application and Service Developments
 - Overall applications work plan 2001-2007 **EC**
- 14.20** Near Term Actions
 - EC Tender Action 2001 **EC**
 - ESA Tender Actions 2000-2001 **ESA**
- 14.50** Views of (potential) user equipment manufacturers, service providers and users **All**
- 15.30** Coffee break
- 15.45** OREGIN session **OREGIN**
 - Status of the initiative
 - Financing and projects
 - Communication and advertising actions
 - Any other business
- 17.15** Wrap up and conclusion **OREGIN**
- 17.30** End of the meeting
