Tasks of the Galileo Contact Point Austria:

- Interface between the international GALILEO scene and the Austrian GALILEO workgroup, consisting of public authorities, research institutes and private companies. Special attention is given to an efficient information flow.
- Identification and selection of applications. Combining user requirements with the performance of the future European satellite navigation system.
- Initiation of pilot-projects to demonstrate future navigation based applications. Strong focus on the interest of participating Austrian companies.

Program management for **ARTIST**

Austrian Radionavigation Technology and Integrated Satnav services and products Testbed

- National program for the provision of Value Added Services based on Satellite Navigation
