Cryptolog is a leading european consulting company in cryptography. We are committed to bringing the best security solutions to our client, by auditing or designing secured system based on our strong cryptographic expertise. We can work on almost any project requiring skills in cryptography : fixed and mobile telecommunication systems, Internet applications, local networks, pay TV, public key infrastructures (PKI), electronic purses, smart cards, micropayment systems...

Our client range includes all type of companies involved in data security : banks, telecommunication operators, pay TV operators, research centers, public institutions... Our expertise includes the security of satellite communications, and we have already audited algorithms for such institutions as the ETSI or the MITI (Japan).

We are also highly committed to fundamental research. We have brought together in our Scientific Board some of the best researchers in cryptography: Jacques Stern, Director of the Computer-Science department at Ecole Normale Supérieure ; David Pointcheval, research fellow at CNRS (French National Center for Scientific Research) and Serge Vaudenay, professor at EPFL in Lausanne, Switzerland.
