Utopika is a supplier of real-time 3D solutions to visual simulation, command, control and training applications. Our focus is to provide end-to-end content creation and delivery solutions for a wide variety of applications including flight simulation, sensor simulation, urban simulation, 3D GIS visualization, and simulation-based training.

Our Mission:

To provide the most comprehensive and accessible set of real-time 3D visualization solutions to transform the way people learn, interact, communicate and conduct business.

Utopika was formed in January 2002 as a result of the efforts of a small group of people who worked in the past in this field in other companies and that believe that a better work was possible to achieve in different conditions. Their staff includes talented and dedicated team players that bring years of experience and expertise in real-time 3D simulation. DigiUtopika employs a small group of people but we are growing quickly. Our headquarters and office is in "Praia da Areia Branca" near Lisbon, Portugal.

At-a-Glance

Vision: Transforming simulation to real life

Markets: High-End to Low-End

Purpose: Using virtual reality in the real world

Corporate headquarters: Praia da Areia Branca , Portugal

Status: Independent and self-owned

**Live the Environment in
Real Time 4D**
