#### **About Fastrax Ltd**

Fastrax develops industry-leading products for optimal utilization of GNSS location services (Global Navigation Satellite Systems). Fastrax transforms GNSS technologies into highly scalable receivers with open interfaces, combined with ultra low power consumption and miniature hardware design. With industry-leading performance, Fastrax receivers navigate continuously even in extreme conditions. Receivers are ideally suited for industrial location applications, automotive applications and high-volume consumer products such as cell phones and sports accessories. Headquartered in Finland and founded in 1999, the company is privately owned and backed by leading venture capital investors.

#### **About the main receivers**

Fastrax main GPS receivers are called iTrax02/8 and iTrax02/4. The special features of the receivers are extremely low power consumption (130mW @2,7V), small size (26\*26\*4,7mm), very good sensitivity (-152 dBm) and optional programmability (iSuiteSDK) with the iTrax02/8. With the programmability you can often save the cost of an external flash memory and an external CPU, which furthermore reduces cost, size and total power consumption.

#### **Smart Positioning with Fastrax Ltd**
