INECO (Ingeniería y Economía del Transporte, S.A.) is a consultancy and engineering firm highly specialised in the transport industry since its creation in 1968. Its shareholders are Spanish public entities related to transportation: Aena has a participation of 61%, RENFE 34% and GIF 5%.

With a multidisciplinary staff of more than 1000 employees, INECO has accumulated a great deal of experience in planning global and inter-modal transport systems which include railways, airports, air navigation, road and maritime.

Our business is not limited to Spain and it traditionally has been very active internationally. Up to date we have worked in more than 25 Latin American, African and Asian countries, as well as for European organisations such as ESA, European Union or EUROCONTROL.

The main areas of activity at INECO related to GNSS are:

- **Air transport:** INECO is involved in a number of studies for Aena, mainly related to the operational implementation of the GNSS, including GNSS trials, GBAS introduction in Spanish airports, flight procedure design and GNSS airworthiness certification. INECO is also currently working for the Spanish National Civil Aviation Authority within the GNSS Implementation Programme in the Air Navigation system of Spain.
- **Rail transport:** INECO and its partner TIFSA are leaders in the development and implementation of new technologies for the railway industry. GADEROS, one of the GALILEO pilot projects funded under the V FWP, is currently being co-ordinated by INECO.
- Other important areas of activity include **Consultancy in concessions, Intermodal transport and logistics, and Road transport**

INECO,
Bringing GNSS Technology
into the Transport Sector
