Kongsberg Seatex is a leading international marine electronics manufacturer specialising in the development and production of precision positioning and motion sensing systems. Our commitment is to provide quality products and solutions for safe navigation and operations at sea in the commercial offshore, maritime, hydrographic and defence industries.

Our applications specific standard products are grouped into the following categories:

Attitude Determination Systems (ADS) - consisting of positioning systems and motion sensors; Automatic Identification Systems (AIS) - ship to ship - ship to shore - Certified AIS transponder and base station solution confirming to IMO specification; Global Navigation Satellite Systems (GNSS) - offering complete GPS and GLONASS (Russian equivalent to GPS) reference station and integrity monitoring solutions, and Surface Position Reference Systems (SPRS) - consisting of differential GPS (Global Positioning System) positioning systems and GPS transponders for vessel tracking and seismic surveying.

We are active in different activities and projects connected to the European developments of the new GNSS solutions as EGNOS and Galileo. Our ambitions are to deliver high performance products based on the excellent opportunities offered by future GNSS services.

*Products for precision positioning and motion sensing for  
Maritime, offshore, hydrographic and military users.*
