History

QSystems, founded in 1992, is an independent, service provisioning and consulting company dealing with research, development and technical support of high technology solutions and systems in the ICT (Information and Communication Technology) sector. The company, which currently employs highly qualified researchers, engineers and software developers with significant expertise in the area of advanced information and communication technology, is presenting impressive growth figures, last years.

QSystems aims to offer high quality services and consultant to companies and organisations, which, through dynamic procedures, demand to strengthen their position in the market, using at the highest possible level the solutions offered by the modern technology. To support its commercial activities, QSystems carries out R&D projects in order to achieve scientific innovation and, in business applicability of the results, prove the company's technical expertise and excellent collaboration skills.

QSystems has a strong Project Management capability with emphasis in Quality Planning and Assurance. It has successfully managed several projects with small, medium and large working teams.
