Scandinavian GNSS Industry Council (SGIC)

SGIC is an association of companies promoting and producing products and systems for satellite positioning and navigation.

SGIC, established in 1996, represents the interests of the Scandinavian Industry in the field of satellite navigation, positioning and timing, with the objective to achieve maximum common benefit from applying these technologies.

SGIC promotes the commercial development of GNSS, for the benefit of its members, by stimulating the market and facilitating the establishment of powerful GNSS related products and new applications, and furthering the understanding of the technology involved.

SGIC acts as a consultative body representing the commercial use of GNSS technology in discussions and negotiations with authorities in Scandinavia and elsewhere.

Membership is open to:

- ? Commercial companies and agencies whose activities include research, development and sale of products where GNSS technologies are utilised.
- ? Public Corporations involved in GNSS technology.
- ? Educational Institutions with GNSS technology in their curricula.

The SGIC member's products represents a diverse spectrum of applications of the GNSS technology in a wide variety of areas.

SGIC is an association of Scandinavian companies promoting and producing products and systems for satellite positioning and navigation.
