

Engineer/Marketing Junior M/F Permanent Contract

Marketing/Strategy Space Applications Engineer

Our company

Founded in 1989, FDC is a human-sized SME specialized in GNSS (Global Navigation Satellite System) applications and Earth Observation (EO).

FDC's staff is mainly composed of engineers piloting or participating in missions, most of which are carried out for the benefit of the European institutions (e.g. European Commission, European GNSS Agency) or the public sector (e.g. CNES, CNRS, Ministry of Defence), in close collaboration with the main European industrial stakeholders in the field.

Your mission

As part of the strengthening of our market research and strategic analysis activities on applications using satellite navigation technologies (e.g. GPS, GLONASS, Galileo, etc.), Earth Observation or Satellite Communication, we are looking for young engineers to provide study and consultancy services to our institutional clients.

The concerned areas are diversified and range from Intelligent Transport Systems (ITS) to Internet of Things, environmental monitoring, synchronization of energy networks and defence applications.

The tasks entrusted to you will cover various activities such as:

- Demand analysis (needs characterization, identification of key success factors, market assessment, forecast and trends, penetration of the different services, etc.)
- Supply analysis (value chain, existing applications and products, key players, competing technologies, technological watch, etc.)
- Strategic and operational recommendations including KPI definition

Engineer/Marketing Junior M/F
