

Space Applications Consultant M/F

Permanent Contract

Space Application Consultant

Our company

Founded in 1989, FDC is a human-sized Consultancy specialized in GNSS (Global Navigation Satellite System), Earth Observation and Telecommunication terrestrial and spaceborne applications.

FDC's staff is mainly composed of engineers piloting or participating in projects related to space-based applications. Most our missions are carried out for the benefit of European institutions (e.g. European Commission, EU Agency for the Space Programme) or the public sector (e.g. CNES, CNRS, Ministry of Defence) and in close collaboration with the main European industrial stakeholders in the field.

Your mission

Space technologies, data and services support today various EU policies and key political priorities, including climate change and the competitiveness of our economy. It also reinforces Europe's role as a global player and represents an asset for its security and defence.

As part of the strengthening of our market and strategic analysis activities, we are looking for young versatile engineers eager to perform studies and consultancy services across a wide range of economic, technical and environmental topics.

Focusing on how the European space assets and technologies can benefit industries and citizens, your daily activities will cover extremely diverse application areas such as infrastructure monitoring, transport, insurance and finance or renewable energies.

As a *Space Application Consultant*, the tasks entrusted to you will cover various activities such as:

- Demand analysis (needs characterization, identification of key success factors, market assessment, forecast and trends, penetration of the different European space services, etc.)
- Supply analysis (value chain, existing applications and products, key players, competing technologies, technological watch, etc.)
- Development of strategic and operational recommendations (impact assessment of policy options, KPI definition, etc.)
- User uptake activities (awareness raising, workshop organisation, etc.)

Integrating our team, you will also be involved in regular project management activities, as well as in FDC's continuous commercial development efforts, contributing to the diversification of our missions and client portfolio.

Space Applications Consultant M/F

Permanent Contract

Your profile

You have a 4–5-year experience as space-application consultant and have a general engineering background or a specialisation in Earth Observation related topics. You have a strong interest in the multiplicity of space-based applications and want to further develop your knowledge in this regard.

You are:

- Organised, meticulous and detail-oriented
- Versatile and fast learner
- Autonomous and yet eager to work effectively and nicely in a team
- Fluent in written and spoken English
- Motivated by the European context
- Flexible for occasional international travel (mostly day-trips)

You have:

- Excellent interpersonal skills
- Advanced writing and presentation skills
- Quantitative and qualitative analytics skills
- Excellent knowledge of MS Office Suite
- Ideally a general technical knowledge of the European Union Space Programme

Any one of the following would be a plus:

- Engineering/Scientific background in space technology
- Additional Specialised Master in Marketing/Business Strategy
- Past academic or professional experience in the space domain.
